

Decorating your league site using the admin panel can be as simple or fancy as you the league owner wish to make it. To begin with log into your admin panel scroll down on the left until you see **League Site Colors.** This should bring you to a page similar to the picture below.

Find or create your background image upload it to a photobucket account. These can be created free at <http://www.photobucket.com>. Once it is uploaded copy the **direct link** and paste it into the box marked **League Site Background Graphic.**

Next locate the hexadecimal code for color you want your text to appear.

Remember light color text works best on dark backgrounds and dark text works best on light backgrounds. For a list of codes you can go to

<http://www.help4gladmins.com/htmlhelp/HexCode.htm> or

<http://www.help4gladmins.com/htmlhelp/colorcodes.html>. You will then need to enter the

selected code in the box marked ***League Text Code***. You may use the same color

code in the next box or pick two more slightly different colors to enter in the next

two boxes for link color and visited link color. Once these codes are completed

click the grey box at the top that says ***Set League Site Colors and Background***.

In a separate window view your league site and make sure you like what you have so far. Make any needed changes to the colors or background to improve the feel of the site. Once you have the background and colors the way you want them you may move on to the next step in decorating your league page.

Setting your league logo is the next step in decorating your page you will need to design or locate a logo for your league. Then load it up to the photobucket

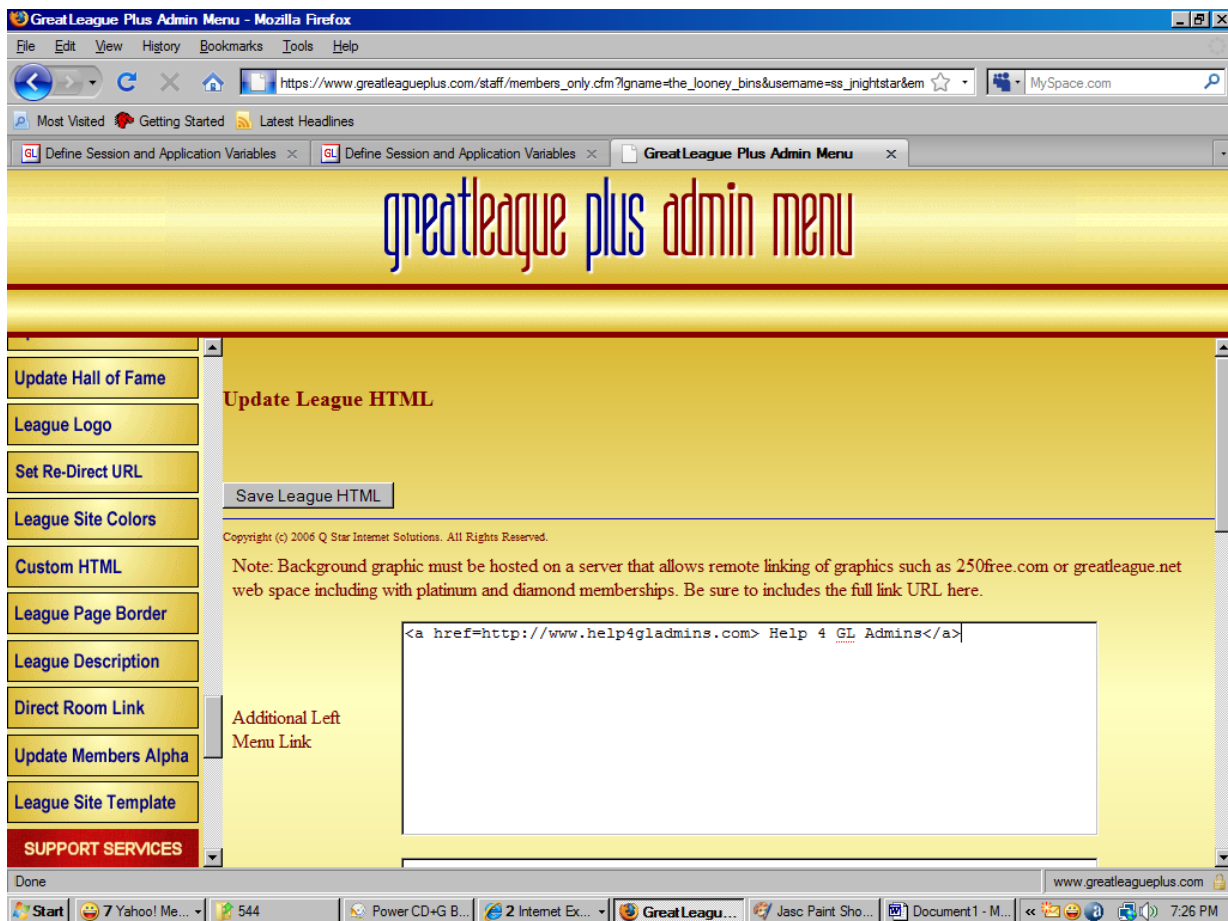

account you established earlier. You will then need to locate the link that says **League Logo** on the left and click on it.

Copy the direct link to your new logo from photobucket and paste in the box marked **League Logo Graphic**. Click on the grey box at the top that is marked set league logo. View your site once more in a separate window to make sure it looks as you want it. If the changes do not show you may need to hit **refresh league site** on left hand side of admin menu. Refresh your window with the league page

showing by clicking **ctrl+F5** at same time. Once you have this section looking the way you want you can move onto the next section.

Next you will need to locate the **Custom HTML** link . In the top box marked Additional League Links you may enter additional links your site may need such as tourney page sites. You will need to enter these links in the format ` webpage name` your link would then look like ` Help 4 GL Admins`

When all your links are entered into the box click on the grey box marked save league html to save the customization. Then click refresh league site on the left hand menu. Click the grey refresh league site button then go to your page refresh and make sure the changes are showing as you planned them.

After you have entered all your links you move on to the next two boxes on the page this is marked upper custom html and lower html. These boxes allow you to place pictures chat boxes slide shows or anything else above or below the standard html already on the page. You will need to decide what you want in these boxes before beginning you can find codes and templates for these items on the help4gladmins site under html and templates. Remember to save each change and check it as you go about building your site by using the refresh. If you need farther assistance please contact great league support for this assistance. Thank you for helping to make greatleague the greatest league site on the web.
